

ENRIQUE GOYRET

WEB FULL STACK DEVELOPER / DATABASES /

ABOUT ME

I'm a web full stack developer willing to gain more experience by working on challenging projects as part of a working team, for an organization that values effort and dedication.

Recently retired from a large multinational company, I'm looking to continue in the job market now as a programmer with business criteria. I believe my long experience dealing with systems implementations, plus my educational background, gives me an edge that adds value and thus can contribute to the success of any project.

I have an analytical mind and love to solve complex problems. My preference is for web backend work. I'm also very interested in learning and working with Blockchain.

EXPERIENCES

Qrono (USA) - Software Engineer (remote)

Oct 2021 to May 2022 – Buenos Aires

Backend development for booking infrastructure platforms through RESTfull API. Technologies: Python and Django. QA automation tasks using Cypress and Pytest. Implementation of Stripe (payment platform), Sentry (exec errors reporting), and writing API documentation.

Bootcamp course - Web Full Stack Developer

Apr 2021 to Aug 2021 – Buenos Aires

4-month full time intensive training (theory plus labs) on front end and back-end web technologies. Master classes, daily homework assignments, individual project, and final group project using agile methodology (SCRUM). Github platform used for all shared work. Technologies learned as per the side bar.

Unilan - Processes automation

Sep 2015 to Mar 2021 – Buenos Aires

Under contract with medium size import/export local company. Helping the company to be more efficient by analyzing administrative and financial processes, and designing and implementing automated solutions, mainly through data base systems. Technologies: MS Access, SQL Server, VBA.

Summary of prior work experience:

33 years working for Citibank at technology and financial control positions in various countries. Based in Argentina, worked 10 years abroad. Strong technology background by education and experience gained in various successful systems implementations, later moved to the Finance area on a more business-oriented role while retaining the technical expertise which has been key in providing specialized support to all departmental information needs and automating their processes.
